

[Ve.S.P.A. Project](#)

(IAU station 565) Bassano Bresciano Astronomical Observatory

VESPA_V12

Discovery date 2014/10/27

Position: 22 00 50.64 +43 28 05.5 (Lacerta)

Type = EW

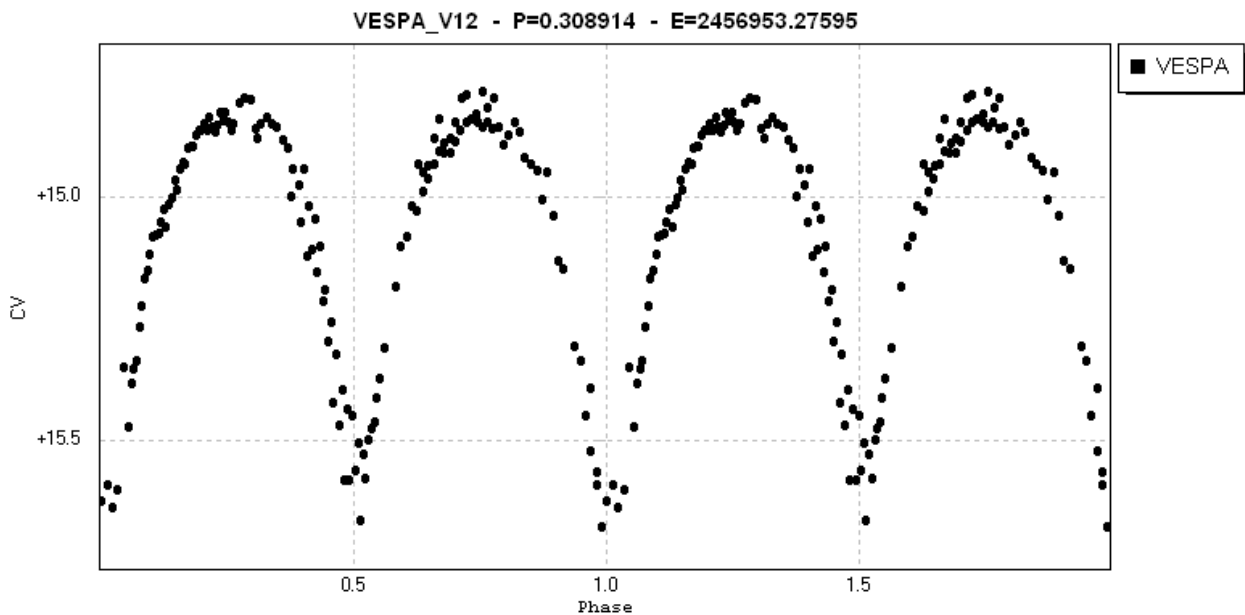

Mag: 14.82 - 15.65 CV

Period: 0.308914

22 Oct 2014 (HJD 2456953.27595)

AAVSO-VSX UID 000-BLK-711

VeSPA Project at (IAU Station 565) Bassano Bresciano Observatory

EW:

W Ursae Majoris-type eclipsing variables. These are eclipsers with periods usually shorter than 1 day, consisting of ellipsoidal components almost in contact and having light curves for which it is impossible to specify the exact times of onset and end of eclipses. The depths of the primary and secondary minima are almost equal or differ insignificantly. Light amplitudes are usually <0.8 mag. in V. The components generally belong to spectral types F-G and later.
